The invention relates to a method for amplification of a target nucleic acid region in a sample using a specific control sequence. The invention is also directed to a method of determination of a target nucleic acid using a special control nucleic acid. Nucleic acids of the invention are used as a control in a reaction for amplifying target nucleic acids and as a control in a hybridisation reaction for determination of target nucleic acids. The present sequence is HCV (Hepatitis C virus) type I DNA specific probe. This probe is used to illustrate the methods of the Invention. Note: This sequence is stated to be same as that shown as SEQ ID NO.3 in sequence listing. However this sequence has additional C at its 3' end
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Amplification of a target nucleic acid region using a specific control
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Amplification; target nucleic acid; control nucleic acid; probe; ss.

The invention relates to purification and amplification of target nucleic acid from biological sample. The method involves and binding target nucleic acid (TNA) in the sample with a material comprising an unmodified silica surface, separating the material from the sample and amplifying TNA in the presence of the material. The method is useful in diagnosis of certain diseases such as inherited diseases like sickle cell anemia and certain types of cancer or in screening blood for presence of target nucleic acid from virus. The method improves reaction efficiency and detection sensitivity of target nucleic acids. The present sequence represents a hepatitis C virus (HCV)-specific probe used in the method of
                                                                                                                                                                                                                                                                                                     /*tag= b

The control nucleic acid sequences are at least in part parallel-complementary to the sequence of the target nucleic acid. The present sequence is ST650 HCV specific probe. Note: This sequence is stated to be same as that shown as SEQ ID NO:3 in sequence listing. However this sequence has additional C at its
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Amplification of a target nucleic acid region using control sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a method for amplification of a target nucle: acid region. The method is useful for amplification of a nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Score 33; DB 6; Length 34;

Hepatitis C virus can be replicated in non-lymphoblastoid mammalian cells by first incubating an HCV sample with the cells until an infecting amount of HCV has been absorbed. Infected cells are then washed and incubated under growth conditions. In an example, the presence of HCV in culture medium of monkey kidney cells inoculated with HCV-infected serum was verified by PCR amplification using two external primers (OUI and OUZ, see AAT39731 and AAT39732) and two internal primers (INI and INZ, see AAT39733 and AAT39732) and two internal primers (INI and INZ, why didastation to labelled probe SI (see AAT39735). Small amounts of virus were shown to be released into the culture medium from secondary cultures. Control (non-inoculated) cells were negative for presence of

The present sequence represents a probe involved in the method of the present invention for detecting hepatitis C virus (HCV). The method comprises: (a) reverse-transcribing the viral RNA; (b) amplifying the resulting cDNA by a single polymerase chain reaction in a reaction mixture having a Mg2+/Tag polymerase chain for bolt 100 nmole/enzyme mixture having a Mg2+/Tag polymerase ratio of about 100 nmole/enzyme unit i, and (c) detecting the amplification product by DEIA (DNA enzyme immunoassay) using an oligonucleotide probe. The sensitivity of this method is at least equal to that achievable by more complicated assays using nested PCR. (Updated on 25-MAR-2003 to correct PR field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a probe containing a 410 or 20 base pair sequence, given in the specification. It is capable of detecting the tuberculosis bacterial group including Mycobacterium tuberculosis, Mycobacterium toobacterium in the mathod and/or Mycobacterium canotti. The method is useful in disease diagnosis
                                                                                   Detection of hepatitis C virus - by reverse transcription, single-step PCR and detection by DNA enzyme immunoassay.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Tuberculosis, Mycobacterium, bovis; BCG; africanum; microti; canotti; monitoring therapy; pathogenic microorganism; PCR; primer; ss.

The present sequence is an amplification primer used in a method for detecting hepatitis C virus (HCV) RNA in biological samples. The HCV RNA is reverse transcribed to generate cDNA. This is then amplified using primers, including the present sequence, corresponding to the 5' or 3' non-coding region of HCV. The method is useful for the diagnosis of HCV infection in patients, in testing the efficacy of anti-HCV therapeutic regimes, and in screening blood for HCV-infected samples. The method provides an improved single-round, reverse transcription/amplification assay which detects low copy levels of HCV RNA. The primers and assay system are designed to allow the co-amplification of multiple regions of the HCV genome, multiple viral species, and an internal positive control (IPC) RNA (or DNA). Simultaneous amplification/detection of multiple regions of the HCV genome increases assay sensitivity and the co-amplification of an IPC decreases the likelihood of false negative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Detecting hepatitis C virus in biological sample involves amplifying reverse transcribed products of virus RNA using amplification primers whose sequences correspond to 5' or 3' non-coding region of the virus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Inhibition, expression, hepatitis C virus, HCV, non-A, non-B, RNA, translation, in vivo, ex vivo, in vitro, treatment, prevention, infection, antisense, non coding, region, NCR, core region, ss.

```
The invention relates to a nucleic acid probe for the classification of hepatitis C virus (HCV) into 3 genotypes. The 3 HCV genotypes are MH1Ami (type 1), MH2Ami (type 2), The probe can be used to classify HCV type to enable prediction of the success or otherwise of interferon therapy in a patient. Sequences ADC54068-ADC54073 sequence is given in the sequence listing, but is not further referred to in the specification.
      This sequence is an antisense oligonucleotide that hybridises to Hepatitis C virus (HCV) RNA, under physiological conditions. The invention relates to HCV antisense oligonucleotides, and also for a vector comprising a nucleotide sequence which is transcribed in an animal cell to generate an antisense oligonucleotide. The oligonucleotides have virucide, hepatotropic and anti-inflammatory activity, and are useful for treating HCV infection by inhibiting translation of type I-V HCV RNA. Hepatitis C virus is a positive strand RNA virus, and is the major causative agent of post-transfusion hepatitis. Persistent HCV infection can lead to chronic hepatitis, cirrhosis, and hepatocellular carcinoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Probe and method for classification of hepatitis C virus (HCV) types used for forecast of therapeutic effect of interferon administration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    HCV; hepatitis C virus; classification; interferon therapy; 5'UTR; signal amplification; probe; ss.

                                                                                                                                                                                                                                                                                                                                                                                                              The present oligonucleotide (ON) inhibits the expression of hepatitis C virus (HCV) RNA, specifically HCV type II and type III protein synthesis is inhibited by 81% and 76%, respectively. The ONs of the invention inhibit translation of HCV types I-V RNA in vivo, ex vivo or in vitro, and can therefore be used to treat or prevent HCV infection. The antisense ONs comprise 10-28 nucleotides complementary to the entire HCV s'-non-coding and part of the core region. The A or S in the ONs name denotes antisense or sense, and the no. indicates the position of the 5'-end of the ON. The ON was tested at 10 fold molar excess to HCV RNA.
                                                                                                                                                                                                                                                                                   New antissense hepatitis C virus oligo:nucleotide(s) - used for inhibiting HCV RNA translation, for the treatment or prevention of HCV
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

AAV35197-V35200, AAV35202 and AAV35215 are primers used in a method for producing a nonstructural protein of hepatitis C virus (HCV) type 1b from a recombinant hepatocyte. Also described is a method for the replication of HCV which involves contacting HCV with the sensitive recombinant hepatocyte, and culturing the hepatocyte. The method may also be used for detecting a substance capable of inhibiting replication of HCV. The method can prepare HCV-sensitive recombinant hepatocyte capable of producing HCV RNA polymerase constitutively, and replicating HCV efficiently for a long period
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Hepatitis C virus-sensitive recombinant hepatocyte - useful for, e.g. replicating HCV and producing its non-structural protein.
                                                                                                                                                                                                                                                                                           Nonstructural viral protein; hepatocyte; detection; replication; inhibition; RNA polymerase; PCR primer; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                60.6%; Score 20; DB 2; Length 21; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       produced from template vectors and containing primer extension products, produced from template vectors and containing sequences corresponding to companiementary to (i) to (iii) below, where the method comprises binding a modular oligonucleotide, comprising 2 parts (or modules), to adjacent stretches on the primer extension products (the modular conjenentary to and capable of binding to the vector derived sequences of the primer extension products and at least 1 module (the capture module) is immobilized or can be immobilised): (i) a primer binding region; (ii) an insert; and (iii) vector derived sequence(s). Also described is a method for determining the nucleotide sequence of a nucleic acid insert in a vector, in which sequencing products are solated via (i) and the isolated products are solated via (i) and the isolated products are solated via (i) and the isolated products are solated via (i) and the labels carried on the sequence sequencing products are visualised to allow determination of the sequence of the insert or a portion of it. (i) and we have the context or a portion of it. (ii) and we have the context or a portion of the context or a portion of the context of the capture of the context of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            binding regions, inserts and vector derived sequences. The present sequence represents a target Hepatitis C virus (HCV) DNA sequence, which is used in an example from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 extension products, particularly sequencing reaction products in which the products contain sequences corresponding or complementary to primer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Isolating primer extension products using modular oligonucleotides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Primer extension product; modular oligonucleotide; identification;

```
The invention relates to amplifying (M1) a nucleic acid, involving contacting one or more extension primers (EP) and target templates (TT) and incubating under conditions to promote interaction of (EP) and templates, extension of (EP) using the interacting (TT), and dissociation of the extended (EP) from (TT), to produce multiple extended (EP) from at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Amplifying nucleic acid for detecting nucleic acid, by extension of one or more primers using target templates having replication terminating feature, dissociation of primer from templates to produce multiple
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            IBX; thermodynamic equilibrium extension of primers; primer; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                        TEX on microarray extended primer 2 #1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Example; SEQ ID NO 34; 75pp; English.

cc least one (TT), where each (TT) comprise a replication terminating feature. In (M1), (EP) and target templates are incubated under isothermal conditions or single set of conditions. The target templates are nucleic acid sequences of interest. Each of (EP) comprises or consists of a target complement portion. Each (EP) comprises or the nucleotides consist of the target complement portion. Back (EP) (EV) the target complement portion. Each (EP) (EV) current comprises non-target complement portion. The method is known as the for amplifying nucleic acid and for detecting nucleic acid and for detecting nucleic acid sequences which involves performing (M1), and detecting one or more of the extended (EP). In (M1), only those sequences targeted by (EP) are amplified, thus allowing specific sequences to be targeted for amplification. Plexibility in the location of replication terminating feature allows flexibility in targeting sequences. If a targeted sequences is not probes associated with a substrate. Multiple sequences with (EP). Simultaneous amplification and detection is facilitated using the control probes associated with a substrate. Multiple and on be detection or probes at different location of a substrate. The present sequence is a synthetic primer sequence used to demonstrate the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 24 BP; 6 A; 5 C; 9 G; 4 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                      The nucleic acid copy no. of a sample can be determined by competitive PCR, using primers which anneal to the target and to a competitor mol. of known copy no. In a specific example a HCV gene was cloned using RT-PCR, to give the plasmid DNA pKIS into which a 5 bp 5'-UTR deletion was introduced to give pKI5/D. Then a sample of HCV patient serum was analysed using the claimed method, the competitor DNAs pK9 and pK11 (prepd. using the PCR primers AAT01493-97) and appropriate primers
                                                                                                                                                                                                            Determination of nucleic acid copy number by competitive PCR - using primers which anneal to target and to a competitor mol. of known copy number.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       inhibiting, treating or preventing HCV infection and liver diseases such as hepatocellular carcinoma, hepatitis or cirrhosis. The DC-SIGN and DC-SIGNR protein are useful for inhibiting HCV infection, treating HCV infection or treating or preventing liver disease e.g. hepatitis, cirrhosis or hepatocellular carcinoma. Antibodies to the polypeptides or non-peptidyl agents can be used for inhibiting binding of a DC-SIGNR or DC-SIGN protein to an HCV envelope glycoprotein. This sequence represents an HCV reverse transcriptase PCR (RT-PCR) primer
                                                                                                                                                                                                                                                                                                                                                                                                                                                      hepatitis; cirrhosis; DC-SIGNR; HCV envelope glycoprotein; cytostatic; antiinflammatory; hepatotropic; virucide; RT-PCR; reverse transcriptase;
agents (antibodies, peptides and other non-peptidyl agents) that may be administered to treat hepatitis, cirrhosis or hepatocellular carcinomas and to diagnose these disease. The present sequence represents a primer used in a hybridisation assay to detect HCV RNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DC-SIGN and DC-SIGNR proteins for inhibiting, preventing or a HCV infection and liver disease e.g. hepatitis or cirrhosis or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to the use of DC-SIGN and DC-SIGNR proteins for

contacting one or more extension primers (EP) and target templates (TT)

contacting one or more extension primers (EP) and target templates (TT)

contacting under conditions to promote interaction of (EP) and dissociation of templates, extension of (EP) using the interacting (TT), and dissociation of the extended (EP) from (TT), to produce multiple extended (EP) from at confit one (TT), where each (TT) comprise a replication terminating cate the extended (EP) and target templates are incubated under cisothermal conditions or single set of conditions. The target templates are incubated under complaints of a target complement portion, preferably nucleotides, where the nucleotides consist of the target complement portion. Each (EP)

consists of a target complement portion. The method is known as the nucleotides consist of the target complement portion. Each (EP)

cusful for amplifying nucleic acid and for detecting nucleic acid sequences which involves performing (MI), and detecting one or more of the extended (EP). In (MI), only those sequences targeted for amplified, thus allowing specific sequences targeted by (EP) are amplified, thus allowing specific sequences. If a targeted sequence consplict and in the same reaction of replication terminating fance to amplified in the same reaction by targeting multiple sequences can be amplified in the same reaction by Multiple sequences with (EP). Simultaneous amplification and detection is facilitated using detection probes associated with a substrate. Multiple and parrian can be detection probes associated with a substrate. Multiple sequences in the same reaction of replace in the same reaction of the same reaction of facilitate the same reaction of the same re
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Amplifying nucleic acid for detecting nucleic acid, by extension of one or more primers using target templates having replication terminating feature, dissociation of primer from templates to produce multiple extended primers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       different detection

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The specification describes a composition of magnetic glass particles, which contain at least one magnetic object with a mean diameter between 5-500 nm. The composition is useful for the purification of nucleic acids. The composition can be used to process large quantities of nucleic acids samples, because it does not involve the particles being centrifuged or the fluids being drawn through glass fiber filters. The present sequence represents a probe for a HCV DNA fragment. The DNA fragment can be purified using the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel composition of magnetic glass particles for purification of DNA or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention describes a method for the measurement of an HCV gene real time detecting PCR. The invention also describes a method where reporter fluorescent colour and a quencher fluorescent colour are combined to an oligonucleotide and the fluorescence of the reporter fluorescent colour is controlled by fluorescence resonance energy transfer. The method can measure HCV exactly with high sensitivity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Labelled oligonucleotide probe used in fluorescence quenching method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Measurement of HCV gene using real time detecting PCR and primer and probe - is highly sensitive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ;

Extracted HCV27 RNA was reverse transcribed into ss cDNA using as primer either Alex90 (AAQ21763) or JH52 (AAQ21764). Alex90 is derived from mucleotides -312 to -283 of the HCV-1 genome (positive strand). JH52 is derived from -93 to -117 (negative strand). Detection of the amplified prods. was accomplished by Southern blotting, using Alex89 as the probe. Alex89 matches nucleotide numbers -203 to -175 of HCV RNA. (Updated on 25-MAR-2003 to correct Pl
                                                                                     Reagents for isolating, amplifying and detecting HCV polynucleotide(s) used to monitor spread of blood-borne non-a, non-b hepatitis virus infection and escreen blood samples for virus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Hepatitis C virus; HCV; reverse transcription; PCR; B lymphocyte; I lymphocyte; immunoassay; vaccine; antibody; probe; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ä
                                                                                                                                                                                                                                                                                                                                                                                         AAT12490 is a ss FAM-labelled oligonucleotide probe having secondary structure (a hairpin loop, no further information given in the specification) which augments flourescence quenching. Additionally it has a modified thymidine base to which TAMRA (a quenching agent) is bound. Formation of a hairpin structure brings the FAM and TAMRA into close
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                proximity, thereby quenching flourescence. The probe is used to illustrate a method for controlling the light emission of flourescently labelled probes. The method involves the addition of a DNA-binding cpd., to a soln of the oligonuclectide, capable of interacting with the label to modify the light emission. The DNA- binding cpd. quenches the fluorescence of the label to an extent that depends on the length of the attached oligonuclectide, i.e. quenching is greater for the full-length probe than for its cleavage fragments, so an increase in fluorescence indicates probe cleavage, indicating the presence of the target sequence
                                                                                                                                                                                                                                                                                                  Fluorescence quenching of labelled single-stranded oligo:nucleotide(s) with DNA-binding cpd., esp. for detecting nucleic acid sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

This sequence represents a probe for hepatitis c virus (HCV) RNA. The invention relates to a method of preparing a composition for the detection of an anti-HCV antibody comprises: (a) purifying or partially purifying HCV virus particles or polypeptides from a cell line infected with HCV, where the cells in the cell line are B lymphocytes or T lymphocytes, and are capable of replicating HCV; and (b) fixing the particles or polypeptides to a solid phase. The method is useful in the diagnosis, treatment and prevention of HCV infection. The HCV infected cell systems can also be used screening programs to develop antiviral agents for treating HCV. The antiviral agents for treating HCV. The antiviral agents for this way may block infected cells. (Updated on 20-MAR-2003 to correct PR field.) (Updated on
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel composition comprising a hepatitis C virus antisense polynucleotide which is complementary to or corresponds to a sense strand of the virus genome, and selectively hybridizes to it.
                         Use of extracorporeal cell systems infected with hepatitis C virus in the detection of an anti-HCV antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The specification describes a pharmaceutical composition which comprises a hepatitis C virus (HCV) antisense polynucleotide. The HCV is characterized by a positive stranded RNA genome which has 40% homology at

                                                                                                        A novel cell jine has been developed which is infected with hepatitis C virus (HCV). The cells in the cell line are B or T lymphocytes and are capable of replicating HCV. The present sequence represents an oligonucleotide probe used in the detection of HCV RNA by strand specific RT-PCR. The cell line may be used for producing HCV proteins for use in immunoassays for anti-HCV antibodies; for producing HCV protein-containing fractions for use in vaccines; and for drug screening to develop antiviral agents for treating hepatitis C. (Updated on 25-MAR-2003 to correct PF field.)
                           Cell line comprising B or T lymphocytes infected with HCV - for production of HCV proteins for use in immunoassays, vaccines and drug

                                                                                AAZ99214/
               중투성
                                                                                                    the polypeptide level to a HCV polyprotein. The antisense polymucleotide binds to cellular polymucleotides which enhance and/or are required for viral infectivity, replicative ability or chronicity. The antisense polymucleotides may also be designed to bind with high specificity, to be composition also composition also composition also composition is used for preventing HCV replication in system. The present sequence represents a probe which was used to isolate a novel HCV cDNA sequence
                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to hepatitis C virus (HCV) proteins and cDNA sequences. The sequences are useful in immunoassays for detecting antibodies directed against HCV antigen; preparing host cells transformed with a recombinant polynucleotide; screening antiviral agents and determining the effect of antiviral agent in inhibiting viral replication in cell culture system; and developing vaccine for treating HCV infection. The present sequence was used to isolate a HCV cDNA clone of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel purified hepatitis C virus polypeptide comprising epitope encoded by hepatitis C virus cDNA, useful as vaccine for treating hepatitis C

                                                                                                                                                                                                                                     extension assay (PSMRA) for genotype determination of Hepatitis C virus (HCV). The method comprises extending an unknown nucleic acid sequence (from a patient) using a primer specific for particular genotype and incomplete set of dNTPs under suitable conditions followed by characterizing and comparing the extension products with known nucleic acid sequences of various genotypes. The present primers are used for detecting nucleotide variations in the 5' untranslated region of the HCV genome. PSMRA is capable of accurately detecting heterozygotes and uncleotide mutations in a nucleic acid sequence. The PSMRA is useful for identifying gene variations such as in different genotypes or subtypes of a given genotype, especially Hepatitis C virus genotypes and subtypes
                                                                                                                                                                                                                AAZ99212-26 represent PCR primers used in a primer-specific and mispair
Primer-specific and mispair extension assay for identifying gene variations, comprises specific primer amplification of unknown nucleic acid sequences of patients using incomplete dNTP sets.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

This invention relates to novel double-stranded short interfering nucleic acids (siNA) that inhibits replication of hepatitis C virus (HCV), where one strand is an antisense strand (ASS) that is complementary to (part of) an HCV RNA (portion) and a sense strand (SS) that is complementary to ASS, and where most of the pyrimidine nucleotides comprise a sugar conviruite to a virucide, antiinflammantory, hepatotropic or cyrostatic activities by modulation (inhibition) of expression or activity of HCV RNA, by RNA interference. The siNA's of the invention may be used to inhibit CC replication of HCV, in cells, tissue explants or organisms, for treating HCV infection and its consequences (liver failure; hepatocellular cancer and cirrhosis), and also for drug screening, diagnosis, target cand cirrhosis), and also for drug screening, diagnosis, target collular uptake undivin and gene mapping (for example of single-nucleotide polymorphisms). The chemical modification improves stability, activity, collular uptake and/or binding affinity. The siNA can be directed to conserved regions of HCV genes, so are active against many different

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention describes a method of identifying a compound that inhibits replication of a hepatitis C virus (HCV) RNA. The method comprises contacting a cell comprising a replication competent HCV RNA containing a heterologous polynucleotide having a first coding sequence encoding a transactivator, with a compound. The method is useful for identifying a compound that inhibits replication of HCV RNA. The kit is useful for detecting replication competent HCV RNA. This sequence represents a primer used to isolate DNA encoding HCV in order to detect the production of the viral RNA in cell lines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Identifying a compound that inhibits replication of a hepatitis C virus (HCV) RNA comprises contacting a cell comprising a replication competent HCV RNA containing a heterologous polynucleotide encoding a transactivator, with a compound.

```

New double-stranded short interfering nucleic acid comprises sugarmodified pyrimidine bases useful for treating infection with hepatitis C

Example 3; SEQ ID NO 78; 183pp; English.

virus.

```
cides (siNA) that inhibits replication of hepatitis C virus (HCV), where one strand is an antisense strand (ASS) that is complementary to (part ASS, and where most of the pyrimidine nucleotides complementary to (part ASS, and where most of the pyrimidine nucleotides comprise a sugar modification. The invention may allow development of compounds with virucide, antiinflammatory, hepatotropic or cytostatic activities by interference. The sinA's of the invention may be used to inhibit replication of HCV, in cells, tissue explants or organisms, for treating replication and its consequences (liver failure, hepatocellular cancer and cirrhosis), and also for drug screening, diagnosis, target identification and validation, genetic engineering, pharmacogenomics, cellular upcake and/or binding affinity. The sinA can be directed to collular upcake and/or binding affinity. The sinA can be directed to conserved regions of HCV genes, so are active against many different
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention relates to novel double-stranded short interfering nucleic acids (siNA) that inhibits replication of hepatitis C virus (HCV), where
                                                                                                                                                                                                                                                                                                                                                                                                              New double-stranded short interfering nucleic acid comprises sugarmodified pyrimidine bases useful for treating infection with hepatitis C

Hepatitis C virus siNA antisense strand SeqID774.

short interfering nucleic acid; siNA; virus replication inhibition; hepatitis C virus; HCV; sugar modification; virucide; antiinflammatory; hepatotropic; cytostatic; RNA interference; HCV infection; liver failure; hepatocellular cancer; cirrhosis; ss.

short interfering nucleic acid; siNA; virus replication inhibition; hepatitis C virus; HCV; sugar modification; virucide; antiinflammatory; hepatotropic; cytostatic; RNA interference; HCV infection; liver failure;

```
This invention relates to novel double-stranded short interfering nucleic acids (siNA) that inhibits replication of hepatitis C virus (HCV), where one strand is an antisense strand (ASS) that is complementary to (part of) an HCV RNA (portion) and a sense strand (SS) that is complementary to (part of) an HCV RNA (portion) and a sense strand (SS) that is complementary to ASS, and where most of the pyrimidine nucleotides comprise a sugar modification. The invention may allow development of compounds with virucide, antiinflammatory, hepatotropic or cytostatic activities by modulation (inhibition) of expression or activity of HCV RNA, by RNA interference. The siNA's of the invention may be used to inhibit cancer replication and tis consequences (liver failure; hepatocellular cancer and cirrhosis), and also for drug screening, diagnosis, target identification and validation, genetic engineering, pharmacogenomics, studying gene function and gene mapping (for example of single-nucleotide polymorphisms). The chemical modification improves stability, activity, cellular uptake and/or binding affinity The siNA can be directed to
                                                                                                                                                                                                                                                                                                                                                                                                             New double-stranded short interfering nucleic acid comprises sugarmodified pyrimidine bases useful for treating infection with hepatitis C
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

This invention relates to novel double-stranded short interfering nucleic acids (siNA) that inhibits replication of hepatitis C virus (HCV), where one strand is an antisense strand (AS) that is complementary to (part of an HCV RNA (portion) and a sense strand (SS) that is complementary to (part ASS, and where most of the pyrimidine nucleotides comprise a sugar modification. The invention may allow development of compounds with virucide, antinflammatory, hepatotropic or cytostatic activities by interference. The siNA's of the invention may be used to inhibit to replication (inhibition) of expression or activity of HCV RNA, by RNA interference. The siNA's of the invention may be used to inhibit replication of HCV, in cells, tissue explants or organisms, for treating HCV infection and is consequences (liver failure; hepatocellular cancer and cirrhosis), and also for drug screening, diagnosis, target identification and validation, genetic engineering, pharmacogenomics, studying gene function and gene mapping (for example of single-nucleotide polymorphisms). The chemical modification improves stability, activity, cellular uptake and/or binding affinity. The sinA can be directed to conserved regions of HCV genes, so are active against many different
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ;

the HCV genome comprises a reparation comperent meparatist of vitua in the HCV genome comprising a HCV vitus genome and a heterologous polynucleotide is present in the 3' non-translated RNA and the heterologous polynucleotide is present in the 3' non-translated RNA. HCV is a cause of chronic viral hepatitis, hepatic fibrosis, cirrhosis and/or the development of hepatocellular carcinoma. A cell comprising the HCV is development of hepatocellular carcinoma. A cell comprising the HCV is identifying a compound that inhibits replication of HCV, for producing infectious viral particles which are useful as a source of virus carcinating particles for various assays, including evaluating methods for inactivating particles. excluding particles from serum, identifying a neutralising compound and as an antigen for use in detecting anti-HCV identifying a variant HCV. An HCV particle is useful as an antigen, as a control in assays that test for the presence of anti-HCV intibutions in biological samples (e.g. blood products and cell-free blood products) and as source of viral antigen to measure the presence and intibute of antibody present in an animal. The sequence presented is the control in an animal. The sequence presented is the control in the present of viral another control in an animal. The sequence presented is the control of antibody present antipact of antibody present and an animal. The sequence presented is the control of antibody present and animal. The sequence presented is the control of antibody present animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 sequence presented is the ed to detect viral RNA in Huh
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Hepatitis C Virus; Non-A, non-B hepatitis virus; HCV; antisense; therapy; inhibition; viral protein precursor; ss.
3' non-translated RNA; 3'NTR; chronic viral hepatitis; hepatic fibrosis;
cirrhosis; hepatocellular carcinoma; secretory alkaline phosphatase;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention discloses a replication competent hepatitis C virus (HCV)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel replication competent hepatitis C virus for producing infectious
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           viral particles and as antigen for detecting hepatitis C virus antibodies, comprises hepatitis C virus genome and heterologous polynucleotide.

and/or Hepatitis B (HBV) viral genomes in a serum or plasma sample using specific primers and probes. The method and oligonucleotide primers and probes are useful for the specific detection of Hepatitis C and/or Hepatitis B viral sequences in plasma and serum samples. This may be contaminated blood and/or serum products. The method is able to detect all reference samples of HBV subtypes AD and AY and HCV subtypes 1 - 5 with 100% accuracy. AAZ88588-Z88591 represent FCR primers used to detect HCV virus in a sample
                                        invention describes a novel method to detect Hepatitis
or Hepatitis B (HBV) viral genomes in a serum or plasma
  specific oligonucleotide primers and probes.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    7 Primers (AAQ67617-20, AAQ67622-24) were used to amplify regions of the hepatitis C virus 5' non-coding (5'NC) region. A probe (See AAQ67615, AAQ67616) which is specific for a conserved base sequence within the 5' non-coding (5'NC) region of hepatitis C virus (HCV) gene was then used to detect amplification products. The probe was labelled using an acridinium N-hydroxysuccinimide ester which is attached to the probe via a linker

The specification describes a method for co-detecting Hepatitis C Virus (HTV) RNA and human immunodeficiency virus (HTV) RNA in a biological sample. The method uses HCV and HIV specific reverse transcribtion primers, either separately or in combination. The reverse transcribed products are then amplified using primers specific for the 5' noncoding region of HCV and/or HTV. The presence of specific products indicates the presence of the appropriate RNA in the sample. The method is used for the sample. PCR primers AAA96551-52 are used to the amplify 5' noncoding region of HCV
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New methods for the simultaneous detection of hepatitis C virus and human immunodeficiency virus in biological samples from humans.
            Forward PCR primer used to amplify a 5' noncoding region of HCV.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Score 19; DB 3; Length 25;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a method and apparatus for the simultaneous detection of multiple biological entities such as bacteria, fungi and viruses by specific nucleic acid amplification. The invention also relates to a kit for simultaneous detection of biological entities. The kit is employed for detecting blood-borne pathogens, associated with a variety of infectious diseases such as respiratory and sexually transmitted diseases. The methods and apparatus are used for the simultaneous detection of biological entities present in biological and environment samples. In particular, they are used for monitoring diseases cause by microoxganisms associated with a respiratory or sexually transmitted disease such as a bacterium (Staphylococcus, Pheumococcus, Gonococcus, Haemophilus, Bacteroides, Escherichia or Salmonella), virus Gonococcus, Haemophilus, Bacteroides, adeno-associated virus, HAV, HCV, HDV, HEV, HGV or TTV), fungus (Aspergillus funigatus, Blastomycosis, dermatitis, Candida albicans) or processe (Entamoceba histolytica). The contract of the patitic of virus of the contraction of the contractio

                                                                                                                                                                                                                                                                                                                                                                                                                                                                          g
                                                                                                                                                                                                                                                                                                                                                                                                         8
New methods for the simultaneous detection of hepatitis C virus and human "immunodeficiency virus in biological samples from humans.
                                                                                                                                                                                              The specification describes a method for co-detecting Hepatitis C Virus (HCV) RNA and human immunodeficiency virus (HIV) RNA in a biological sample. The method uses HCV and HIV specific reverse transcribion primers, either separately or in combination. The reverse transcribed products are then amplified using primers specific for the 5' noncoding region of HCV and/or HIV. The presence of specific products indicates the presence of the appropriate RNA in the sample. The method is used for the simultaneous detection of the presence of HCV RNA and HIV RNA in a sample. PCR primers AAA96560-61 are used to the amplify a fragment of HCV

Detecting hepatitis C virus in biological sample involves amplifying reverse transcribed products of virus RNA using amplification primers whose sequences correspond to 5' or 3' non-coding region of the virus Claim 30; Page 27; 28pp; English.

The present sequence is an amplification primer used in a method for detecting hepatitis C virus (HCV) RNA in biological samples. The HCV RNA is reverse transcribed to generate cDNA. This is then amplified using primers, including the present sequence, corresponding to the 5' or 3' non-coding region of HCV. The method is useful for the diagnosis of HCV infection in patients, in testing the efficacy of anti-HCV therapeutic regimes, and in screening blood for HCV-infected samples. The method provides an improved single-round, reverse transcription/amplification assay which detects low copy levels of HCV RNA. The primers and assay

system are designed to allow the co-amplification of multiple regions of the HCV genome, multiple viral species, and an internal positive control (IPC) RNA (or DNA). Simultaneous amplification/detection of multiple regions "of the HCV genome increases assay sensitivity and the co-amplification of an IPC decreases the likelihood of false negative results because of PCR inhibition

                                                                                                                                                                                                                      Sequence 43, Application US/08240547

Sequence 43, Application US/08240547

Patent No. 5527669

GENERAL INFORMATION:
APPLICANT: Resnick, Robert M.
TITLE OF INVENTION: Primers and Probes for Detection of
TITLE OF INVENTION: Hepatitis C and No. 5527669el Variants
NUMBER OF SEQUENCES:
ADDRESSEE: Hoffmann-La Roche Inc.
STREET: 340 Kingaland Street
CITY: Nutley
STATE: NJ
                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                  DB 1; Length 26;
